

Get the effluent out!

Let the power of **solid-digesting bacteria** do the hard work for you.

- Reduced crust and solids
- Reduced odour
- Easier pumping
- Increased pond capacity
- Increased nutrient uptake

Effluent
Pond Treatment
fluent

Reduced crust. Easier pumping.

Fluent® is a biological treatment product that utilises the powerful solid-digesting activity of bacteria to break down solids in effluent ponds.

How it works

Fluent® is simple to use and all-natural. It contains specific facultative bacteria, along with a proprietary blend of bio stimulants to enhance the digestion process to reduce solids, odours and ammonia in stored waste.

How much product do I need?

Fluent® is sold in 10kg pails – each pail contains 20 x 500g WSP (Water Soluble Packs).

For a 500m³ effluent pond, 4 packs would be required for the first application, and then just 1 pack per 100 cows per month for maintenance.

Refer to the 'Dose Rates' chart opposite to determine how many pails you would need to service your farm.

Cost example

12 month period.
1,000m³
effluent pond.
400 cows.

Initial Application:
8 packs in the first month
Maintenance Application:
4 packs once a month

After 12 months, 2.6 pails
of Fluent® have been used.
Total ANNUAL cost
= \$1,950

10kg pail

= 20 x 500g WSP
(Water Soluble Packs)

Before

After

How to use

Initial treatment:

1. Calculate volume of effluent: $L \times W \times D = m^3$.
2. Refer to 'Dose Rates' chart below to determine correct amount of product to add.

Maintenance treatment:

1. Add maintenance dose on monthly basis after initial treatment.
2. Refer to 'Dose Rates' chart below to determine monthly dose.

Directions

1. Refer to the 'Dose Rates' chart below to determine correct amount of product to add.
2. If your pond has a crust, add the recommended amount of product into a bucket of water and mix thoroughly. Add solution directly into the drain that leads to the receiving pond. Be sure to wash the solution down with additional water.
3. If your pond does not have a crust, you can simply throw the packs out onto the water where they will dissolve.

Dose Rates

Application	Schedule	Dose Rate	Cost
Initial Application	First month	2kg (4 Packs) per 500 m ³	\$150
Maintenance Application	Once a month	0.5kg (1 Pack) per 100 cows	\$37.50
