

“New” DD1 Drain Dosing Dispenser

Introduction

It is no longer acceptable to allow grease deposits to build up in the drainage system, causing odours and blockages, which can prove costly and inconvenient. Pouring harsh chemicals down the drain to clear fats, oil or grease is also not permitted and can be harmful to the environment. Our new DD1 battery powered dispenser provides an easy and affordable solution to the automatic dispensing of your Enzyme or Bacteria.

Application

Drainage outlets in areas where food preparation is taking place should have a means of preventing grease build up that can lead to blockage and odour problems. The DD1 can easily be installed directly into the drain outlet, grease trap or Pumping stations.

How Does It Work

The DD1 will dispense a pre-determined volume of product into the drainage system at a pre-set time, typically when the kitchen is not in use. This allows time for the product to thoroughly break down the fatty deposits and be flushed away in the morning.

Rugged

The IP65 Polycarbonate enclosure provides protection against water ingress and high temperature environments. Without the need for mains power, the DD1 is more than suitable for all kitchen and food preparation applications.

Key Features & Benefits

- The DD1 comes with pre-programmed delivery rates making the unit quick and easy to set up. Simply choose the current time, choose the time you want the unit to dispense and then choose your delivery rate.
- Pre fitted with a specially designed long life battery pack ensuring the minimum of installation time and only annual maintenance.
- Being battery powered it is safe for the kitchen environment and requires only the minimum of expertise to install.

Technical Specs

- 6v Alkaline Battery Pack
- Time controlled with selectable dosage rates
- Flow rate of 140ml/min
- IP65 enclosure 180mm x 110mm x 90mm
- Approvals > EMC 89/336/EEC EN50081-1 LVD 72/23/EEC
- Weight is 1.4 kg
